

FIG.1

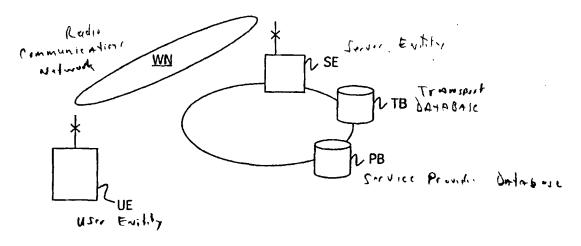

FIG.2

"REPLACEMENT SHEET"

S1-a user defines at least one itinerary search criterion

S2 – a request is sent to the server entity SE. This request comprises at least one itinerary search criterion and one service

S3 – the server entity SE computes an itinerary from the search criterion or criteria comprised in the request for the various transport modes

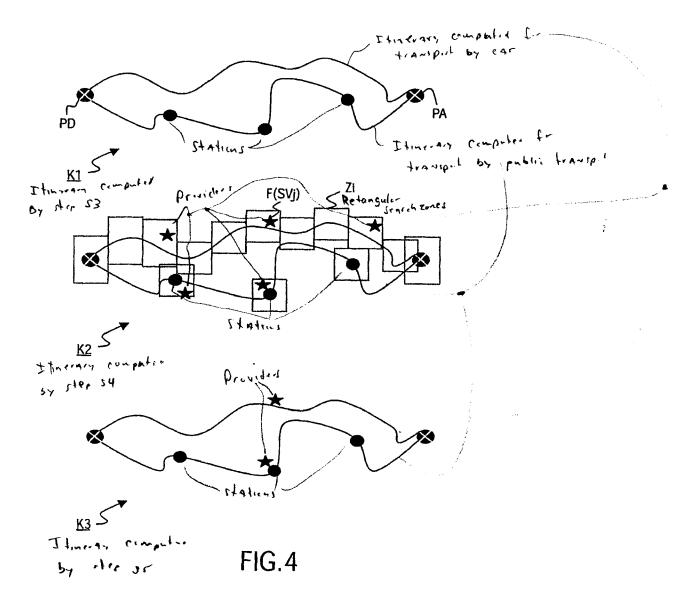

S4 – the server entity selects for each service indicated in the itinerary search request for the various transport modes

S5 – the server entity elaborates a response which comprises the computed itinerary with localization of the selected providers for the various transport modes

S6- the user entity receives the response and presents it to the user
